

Mag-Stripe Time Clock

The Z14 is a practical timekeeping solution that offers employers valuable labor management technologies through two device options, including a proximity-based unit or magnetic stripe card reader.

With the Z14 employers benefit from a practical, affordable, real-time solution (Ethernet-enabled) with superior internal processor and memory capacity.

Punching Options

Punch Data Collection

Collecting employee punches with either of the Z14 devices can easily be done through the entry of an employee PIN code.

In addition, if you're looking for added convenience or to reduce the time required at the clock the Z14 permits employees to use a magstripe card.

Features

The Z14 offers employers the tools required to better manage company departments and employees by the hour and throughout the work day.

Key features include:

- Magstripe card
- Employee PIN
- Simple, wall mount setup
- Large clock display for easy employee clocking in/out

Connectivity

The Z14 connects to the web to send employee data for online supervisor editing exclusively through an Ethernet connection, also commonly referred to as "digital," Internet based, or "IP based."

With this connectivity method, punches are continuously sent throughout the day as employees record punches.

Badge Cards

Custom Card Printing and Encoding

Your cards can be customized to be pre-encoded with specific information, such as employee names and employee numbers. Custom card printing is also available in four color, two color or black and white.

Ask your timekeeping representative for more information.
