

Simple, Real-time Solution

FlexClock is a feature-rich timekeeping solution that offers employers a wide variety of valuable labor management technologies through a selection of practical timekeeping devices.

Through the FlexClock Z12 employees can clock in/out with a mag-stripe badge card, PIN number, or barcode* card to record time punch data. Supervisors can then access employee data online in real time.

Punching Options

Punch Data Collection

Gather employee punches using a mag-stripe card, PIN code, or barcode card.

The Z12 with barcode slot reader (sold separately) offers the ability to integrate with certain third-party barcode cards for employers already using barcode technology.

Features

Z12 is a plug-and-play device that is simple to operate. The clock easily and quickly mounts to a wall through a mounting bracket.

Employers who are accustomed to mag-stripe badge cards but are upgrading to Ethernet lines from analog or simply need a real time connection have the ability to continue using badge cards for clocking in/out.

Connectivity

The Z12 connects to the web through an Ethernet connection in real time to send employee data for online supervisor editing.

Also referred to as a “digital,” “Internet-based,” or “IP based” connections, data is sent continuously throughout the workday as employees record punches. The Z12 is a simple and affordable solution for employers with on-site Ethernet connectivity.

Badge Cards

Mag-stripe vs. Barcode Units

The Z12 is available as two separate models, one that supports mag-stripe cards and a second model for barcode cards (slot type). To ensure an existing barcode card is compatible with the Z12, it is recommended that a sample card be mailed to your service provider for testing.
